

An Exterior Graphic Annunciator is an Annunciator, which is mounted outside, and is most often used for applications that have a campus layout, such as apartment buildings and schools/colleges. The Exterior Graphic Annunciator can show the Fire Alarm device location, within the floor layout, or it can have one general alarm Led in each building, as is the case in a campus situation. In the campus situation, the fire truck would pull up aside the Annunciator, and know which building is in alarm, as well as how to quickly locate the building.

Kirkland specializes in Fire Alarm Graphic Design, having an exceptional drafting department, and Graphic Display methods, that allow for a clear, concise illustration of the layout, including using full color graphics. There is no additional charge for colors utilized in the display, with unlimited colors to choose from. Our Exterior Annunciator display is either a brushed silver aluminum product, or white, and the image is printed with our high resolution, large format printer. We use silkscreen inks, which are cured, and therefore are able to withstand varying weather conditions.

Features Of Kirkland Exterior Graphic Annunciators:

- Exterior Annunciator backboxes are constructed of cold rolled steel with fully welded and grounded seams and painted with a black powder textured coat for a truly finished appearance.
- Exterior Annunciator doors are stainless steel with (5) tamperproof screws, holding the door tightly shut, which keeps it water tight and tamperproof.
- A variety of display materials are available. Standard is silver brushed aluminum or white aluminum.
- Full color graphics at no additional charge.
- The best delivery of finished product in the business... guaranteed!
- Is hardwired to terminals.
- Is available in Directory and Graphic Style.
- UL and CSFM listed as a complete assembly
